

Dialer Download

Last Updated Thursday, 21 June 2007

The WebNexus/SCR Online Dialer is a very small basic program that holds an updatable phone book of all our dial up numbers throughout the US. The program will not only set up your internet connection but your email program as well. We also have a dialer only install for those that already have other email accounts set up that shouldn't be touched. You must have a current WebNexus Dial-up Account to use this dialer. If you do not, contact us and we can get you online in minutes! Our dialers are made to match your email accounts. Choose the download that corresponds with the email account domain that you have from the list below. For example, if your email is name@scronline.com, choose the @scronline.com Email Dialer Download.

If you do not have or do not wish to have the dialer configure your email accounts, you may use a stripped down version that will only set up your dialer and leave all your current email settings as they are.

To download the file you need, click on the globe below that corresponds with the email domain you have chosen with us. See instructions below.

@webnexus.net

@scronline.com

@matterofmail.com

Dialer Only

Speed Stream Web Accelerator

If you are a web accelerator customer, you must also download and install the corresponding software for your web accelerator. Click the globe above to download. Be sure to uninstall your old software before installing the new if you are upgrading. This is necessary for both the dialer and the accelerator. Once you have downloaded the web accelerator, proceed to our installation instructions.

- When you click the globe, a window will pop up asking if you want to run or save the file. Click Save.
- The Save As window should come up with Desktop already in the Save In field. Click Save button.
- The file will download. The sizes are approx. 750 Kb.

- When it reads finished, click the Close button. The file should now be on your Desktop. It is a good idea to visit the installation and set up instructions page and read through it or print it out before you begin so that you will be familiar with the process and know what to do. Click here for the installation and set up instructions page.

Once the download is complete, disconnect and close all programs. Remove any old dial up software that is currently on your system either by using the Add/Remove Programs tool in your Control Panel or right clicking on the dialer icon on your desktop and selecting Uninstall. Contact us if you have any problems with this.
